

OSTEOPOROSIS CARE IS CHANGING FAST. LET'S ADVANCE IT — TOGETHER.

A free regional CME on the newest evidence — from GLP-1–related bone loss to opportunistic imaging and treat-to-target therapy — and on how our practices can complement one another to raise bone health for the whole community.

FREE • 1 HOUR CME

Recording available on demand for all registrants

Campbell  Clinic®  Campbell Clinic Foundation
CENTER FOR BONE HEALTH MOVING LIVES

 FREE |  1-HOUR CME |  VIRTUAL |  MONDAY, OCT 5 |  4:00 PM CT

FACULTY Christopher Cosgrove, MD & Jimmie Mancell, MD panelists • Dudley Phipps, PA-C moderator

WHAT'S NEW IN THE LITERATURE

- GLP-1 & rapid weight loss — bone/lean-mass loss, who to watch
- Opportunistic CT & AI — silent low BMD in scans already done
- Beyond the T-score — VFA & TBS reclassify risk
- Treat-to-target & anabolic-first sequencing
- Fracture liaison services — cutting re-fracture & mortality

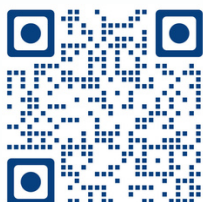

WHEN TO THINK BONE HEALTH

by presentation & finding

- ✓ After any fragility fracture
- ✓ A confusing or discordant DXA — or a positive VFA / falling TBS
- ✓ Rapid weight loss on a GLP-1
- ✓ Before elective spine or joint surgery
- ✓ Treatment failure or complex / secondary osteoporosis

A SHARED GOAL, COMPLEMENTARY STRENGTHS. Osteoporosis reaches into every specialty, and no single practice raises the region's standard alone. This hour is about getting current together — and understanding how our practices complement one another to give Mid-South patients the best possible bone health.
